## EDUCATION

### Dalhousie University

*Bachelor of Computer Science*

Halifax, NS

*September 2019 – August 2023*

## RELEVANT EXPERIENCE

### Junior Developer & QA Tester

*MARS VR Lab*

January 2022 – August 2022

*Halifax, NS*

- Developed VR technology-based interactive elements in the Unity engine using C# programming, contributing 2K+ lines of code to an established codebase via Plastic SCM.
- Collaborated with animators, level designers, and the leadership team to successfully ship over 5 innovative game levels for IWK Health Centre in a fast-paced environment.
- Conducted rigorous testing on the application's database to validate data management operations, contributing to the overall stability and reliability of the access control system.
- Executed game testing plans using different testing methodologies and ensured Quality Assurance standards were met throughout the testing phase.

### Software Quality Assurance Engineer

*Modest Tree*

May 2021 – August 2021

*Halifax, NS*

- Created and executed test cases while identifying and tracking defects across multiple platforms, contributing to over 10 major releases.
- Designed various 3D and virtual reality solutions using the Modest3D development suite.
- Leveraged cross-functional collaboration with the development team to perform intricate software testing, driving a 30% enhancement in product functionality.
- Independently managed and executed the Quality Assurance process, compiled comprehensive documentation, and actively participated in strategic planning for the successful public release of the company's innovative mixed reality software solution.

## ADDITIONAL EXPERIENCE

### Live Data Operator

*Nielsen*

August 2023 – Present

*Halifax, NS*

- Monitor and record live statistics for major North American sports events using various software.
- Ensure accurate data entry and maintain quality standards for output in sports websites and applications.
- Collaborate with a team, providing consistent and timely reporting while adapting to league schedules.

## PROJECTS

### Car Maintenance Web App | *React*

July 2023

- Developed a user-friendly React web application, integrated with REST APIs and a MySQL database, that serves as a comprehensive platform for car owners to track maintenance schedules and find nearby local vendors.

### Otrio Board Game | *Android Studio*

March 2023

- Developed an Android application for *Otrio*, a strategy board game, implementing game logic and multiplayer capabilities to provide a fun and casual gameplay experience for users.

### Endless Runner Game | *Unity Engine*

November 2022

- Created an engaging 3D endless runner game in Unity Engine, showcasing immersive gameplay mechanics, fluid character animations, and responsive controls.
